PASSION FOR AUTOMATION SOLUTIONS

Pharmabotix is pioneering the deployment of innovative robotic technology and automation in Pharma and aiming to be the first choice for technology partnerships. We offer pharmaceutical solutions that bring products to market quickly and safely to contribute to society's well-being and health.

LOOKING FOR A PARTNER TO ROBOTIZE YOUR PRODUCTION?

You have many automation and robotics projects at the same time and don't know where to start? You don't have the time or the know-how to work on projects efficiently and effectively - and are looking for specialists to support you? In this case Pharmabotix is your expert partner in the field.

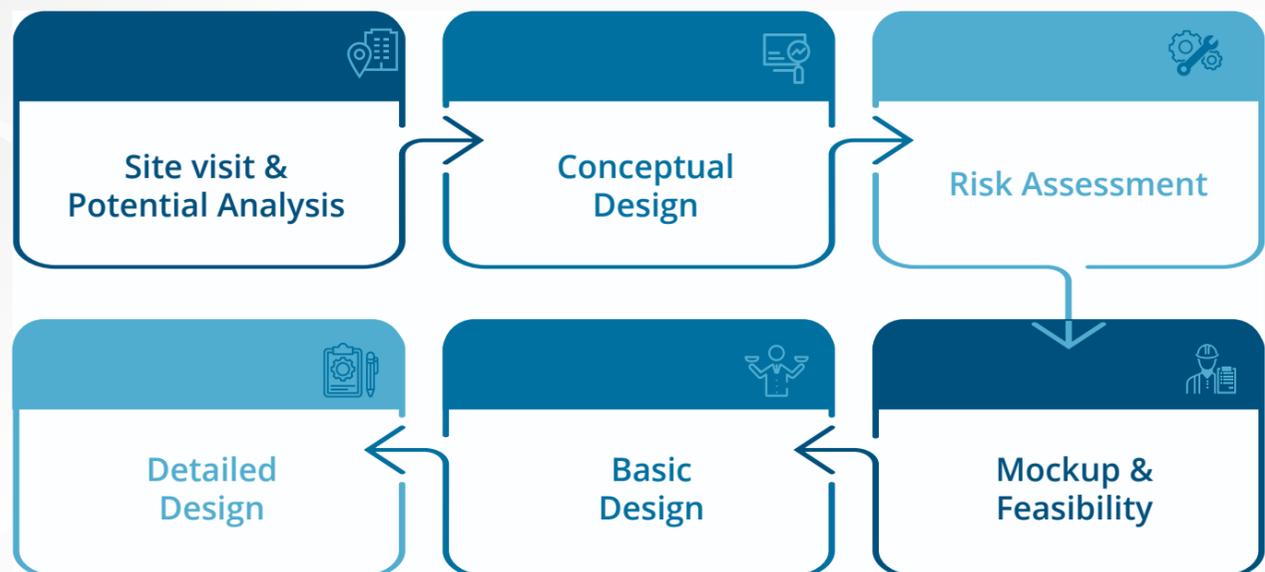

We support you from the first minute of your project - from the potential analysis, through URS support to the ready-to-use automation solution. We put all our expertise in robotics, automation, engineering and software at your disposal.

Our solutions can be used for a wide range of applications:

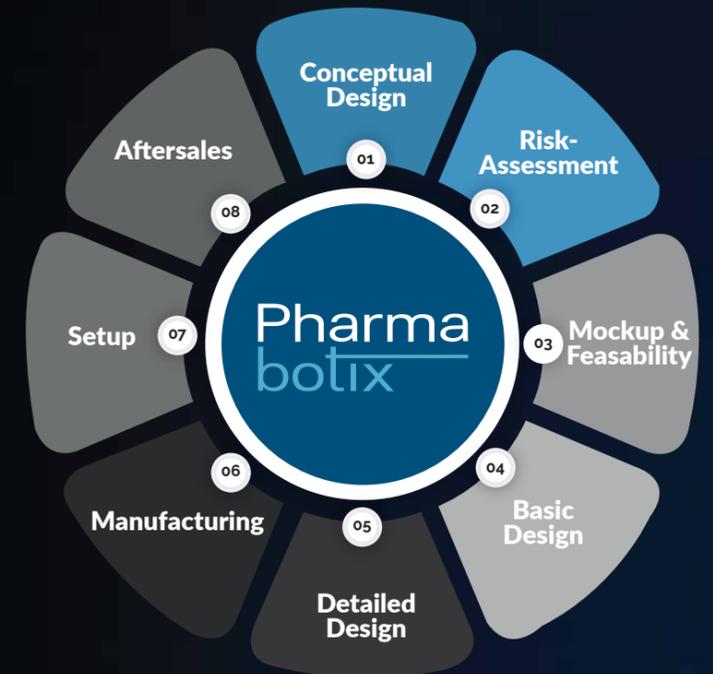

- Transport and handling of vials.
- Automation of assembly processes.
- Implementation of fully automated packaging solutions.
- Camera inspection & quality control.

Your application is not listed? No problem, our specialists will provide a solution for your problem.

SERVICES

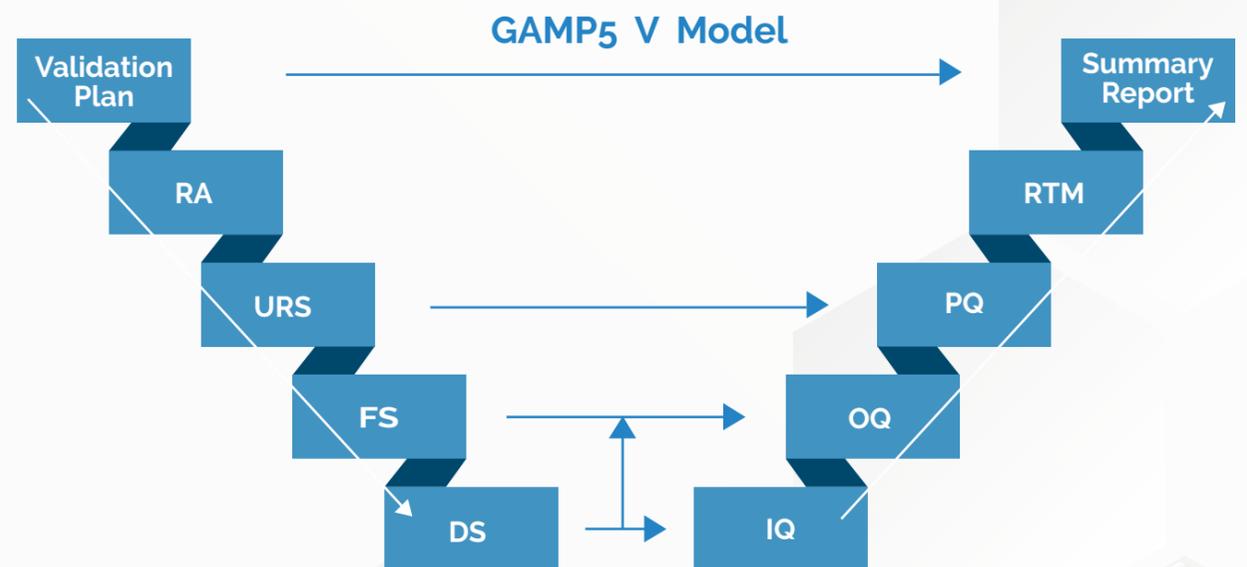

A successful project requires a sound base, this is why Pharmabotix sets high value on the initial project steps consulting, conceptual and basic design as well as appropriate feasibility studies. Working through these first steps carefully and to the full extent is an essential pre-requisite for success. Pharmabotix is also offering consulting services in the field of robotics & automation.

REGULATORY ENVIRONMENT

Pharmabotix follows the current GMP and GAMP 5 (Good Automated Manufacturing Practice) guidelines - because we know that documentation, validation and qualification must be given the same importance as the equipment itself. We thus ensure that the equipment meets the customer's needs and is compliant with the regulatory authorities.

Our internal processes are consistently structured according to the GAMP 5 model and thus our standard: Patient safety is always the focus of our actions.

OUR SOLUTIONS

State-of-the-Art-production facilities in Pharma require smart, flexible, high-performance production equipment. Pharmabotix system designs are easy to operate and navigate. Low-maintenance and easy-to-clean equipment provide efficient performance and better margins.

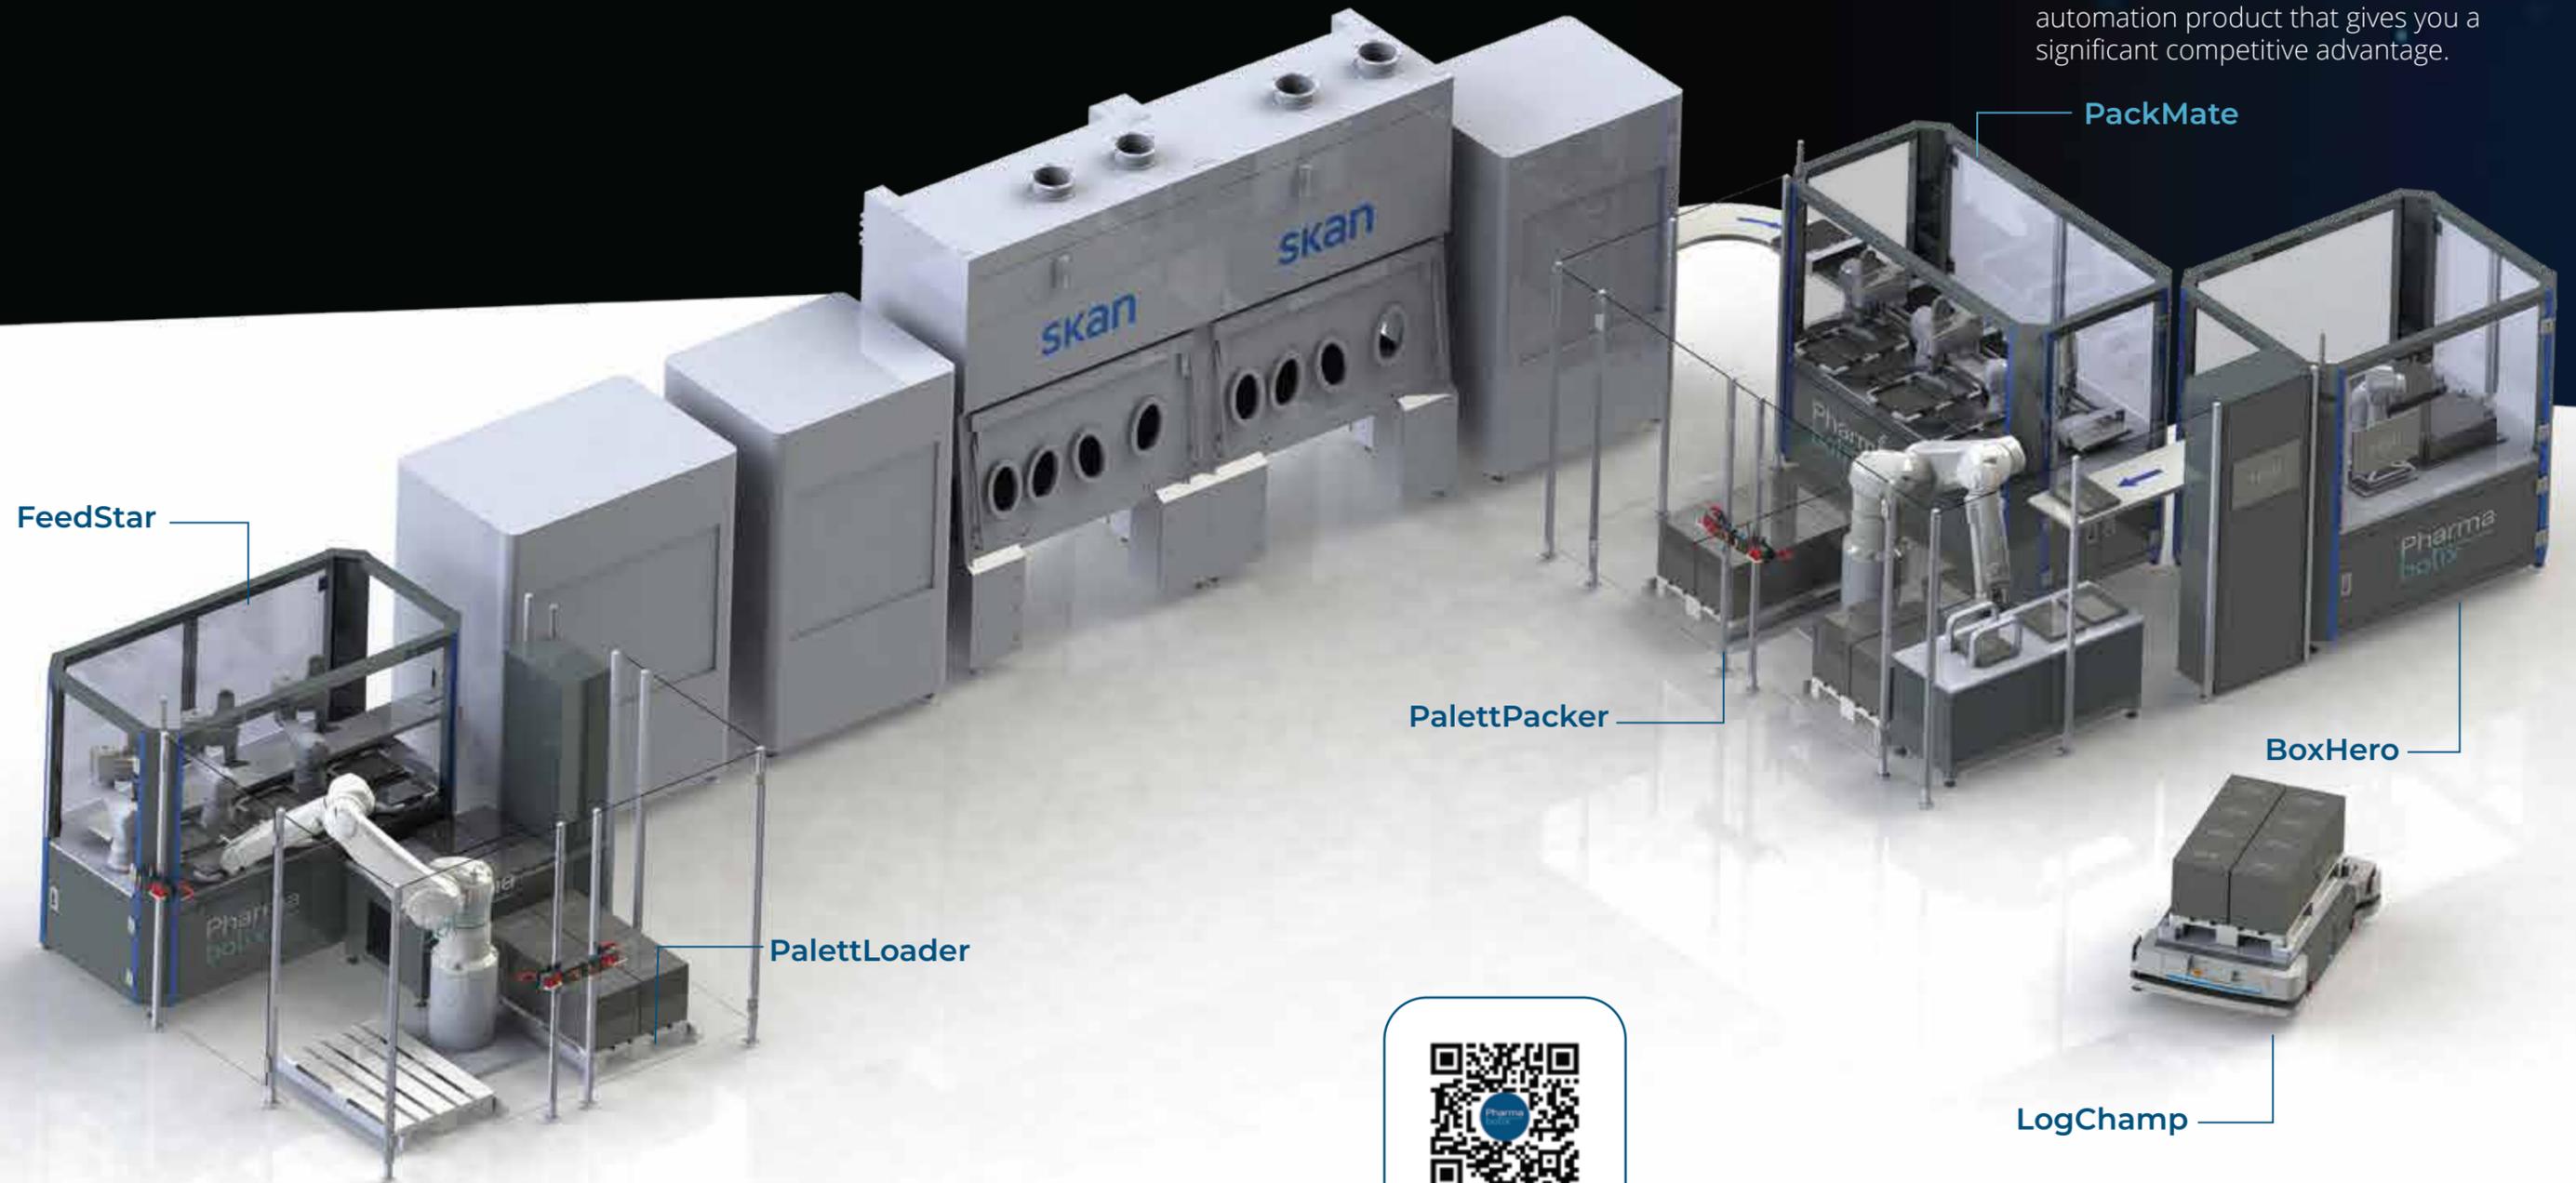

VIAL PRO

The VialPro product family was specifically designed for liquid or solid vials filling lines. All handling steps for primary packaging components around the aseptic core including Box-handling prior to and pallet stacking after filling and closure can be performed by the VialPro components, that way, the VialPro concept

provides an end-to-end-solution to challenges around the handling of primary containers.

By deploying the VialPro components operators are relieved from non-value-added repetitive work while decreasing the risk of human error and hence improving product safety.

In the essence, VialPro is a robust automation product that gives you a significant competitive advantage.

ASEPTIC SOLUTIONS

Aseptic solutions require the highest level of competence in the areas of engineering, software, robotics, manufacturing and, of course, validation and qualification. Our engineering team is constantly striving to solve customer needs efficiently and effectively through smart engineering.

- ✓ Highly flexible and robust robotic solutions with intelligent gripping systems.
- ✓ Simple, fast and safe changeover from one product to another.
- ✓ Sterile design for optimal decontamination and easiest cleaning.
- ✓ Solutions that take up as little space as possible in the isolator and are optimally integrated into the demanding environment.
- ✓ Simple operation via central HMI on a 24" Touchscreen.

We support you in the automation of a wide variety of processes such as the handling of:

- Cans
- Bottles
- Penfills
- Canisters
- Vials
- Syringes

As in all other applications we use the latest robot technology from Stäubli Robotics to meet highest customer standards.

AFTERSALES

We value our customers and support them throughout the lifecycle of the project and beyond.

Our maintenance specialists are always prepared for quick, reliable interventions when problems arise. We solve most customer problems by remote telemaintenance using HoloLenses to efficiently support on-site staff. When this is not possible, Pharmabotix is available on site, and offers customized maintenance packages, to keep processes seamless.

MAINTENANCE PACKAGES

We can equip customer systems with secure remote maintenance at no additional cost. Contact us directly for more information about our maintenance contracts and data protection policy.

OPTIMIZATION & MODIFICATION

Further applications and the need for optimization may arise over the lifetime of a production plant. Pharmabotix may offer to retrofit or upgrade technology, set up new products or revalidate existing equipment.

ABOUT PHARMABOTIX

Does your company need to optimize production, but you wonder who can help? Pharmabotix is a talented young team dedicated to technology. With years of industry experience in automation and mechanical engineering, the love for our work and commitment to our customers is palpable. Pharmabotix is setting new standards in engineering, software, consulting, and paving the way—for automation solutions in pharmaceuticals.

We are passionate engineers who value honesty, loyalty, decency, and trust. We are a cohesive team and provide an open environment built on transparency. Each member is as important as the other—we cherish this equality and hold ourselves accountable to represent our values to our customers, suppliers, employees, and society.
